Vol. 18, January–June 1982

CONTENTS

Atomic and Molecular Physics

Mass absorption coefficients and range of beta particles in Be, Al, Cu, Ag and Pb..... *Nathu Ram, I S Sundara Rao and M K Mehta* 121–126

Dissociation energies for the electronic ground state of BeCl, GaH and LiH.....*N Rajamanickam, U D Prahllad and B Narasimhamurthy* 225–231

Relative vibrational transition probabilities in the ($B^3\pi_g - A^3\,\Sigma_u^+$) system of nitrogen for Hulbert-Hirschfelder oscillator model..... .....*R S Godge, Sharada Itagi and V V Itagi* 233–236

Excited atomic state of Li^-.....*C V K Baba, M G Betigeri, V M Datar, M B Kurup, R P Sharma and P Singh* 295–301

Centrifugal distortion constants of pentafluorobenzene from its pure rotation spectrum.....*S Doraiswamy* 303–309

2S-excitation of atomic hydrogen by electrons at intermediate energies .....*J N Das and N Saha* 397–403

Calculation of force constants and mean amplitudes of vibration of octahedral XY_6 molecules using frequencies and zeta constants..... .....*V A Chinnappan and A Natarajan* 501–509

Relationship between torsional frequency and potential barrier height for AB_n type molecular system.....*Y S Jain, B Singh and B N Khanna* 511–516

Experimental Techniques and Instrumentation

Principle of massive support in the opposed anvil high pressure apparatus .....*Mohammad Yousuf and K Govinda Rajan* 1–15

General Relativity

Black hole physics in globally hyperbolic space-times..... .....*P S Joshi and J V Narlikar* 385–396

Liquids

Solution of Ornstein-Zernike equation for one-dimensional fluids..... .....*B B Deo, B P Das and A C Naik* 89–98

Relaxation behaviour of phenol and cresols in highly viscous media.... .....*Mradula Chauhan, Mridula Gupta, S K Saxena and J P Shukla* 339–343

Mathematical and Statistical Physics

Quantum corrections to the thermodynamic properties of a two-dimensional fluid with hard-core potential.....*L Rai and S K Sinha* 17–24

Weights of elementary representations in SU(5)-SO(10)-E_8 chain..... .....*Tapas Das and S K Soni* 349–383

A green function approach to shear viscosity coefficient..... .....*A K Heblekar, A S Wagh and I M Boswarva* 405–425

A method of solution of the Ornstein-Zernike equation in one and three dimensions.....*B B Deo and B P Das* 517–523

Normal form expansion in an algebraic way.....*Martin Rivas* 525–532

Mechanics

Converging shock waves in metals.....*H S Yadav and V P Singh* 331–338

Nuclear and Particle Physics

Off-shell behaviour of α-α interaction potentials.....*N R Sharma* 25-37

Phase shift analysis of $\pi\pi$ scattering.....*B B Deo and J K Mohapatra* 39–48

Collective field in Hamiltonian and Lagrangian (path-integral) approach: An application to O(N) Heisenberg spin operator.....*Arunabha Guha* 157–173

Pion-nucleus optical potential: The pion-absorption contribution..... .....*S C Phatak* 175–198

Radiative decays of charged leptons in arbitrary order..... .....*P P Divakaran and R Ramachandran* 199–204

Long range alpha emission in *P*-wave neutron induced fission of ^{235}U ....*S C L Sharma and G K Mehta* 205–210

Approximate angular momentum projection for an intrinsic random phase approximation Hartree-Fock state.....*Nazakat Ullah* 211–214

On certain correspondences among various coupled-cluster theories for closed shell systems..*Sourav Pal, M Durga Prasad and Debashis Mukherjee* 261–270

Incoherent scattering functions of 145 keV gamma rays by *K*-shell electrons in Y, Ag and Au.....*A Raghava Rao, S V S Ramana Reddy, K Prem Chand, K L Narasimham, K Parthasaradhi and V Lakshminarayana* 271–278

Coherent pion-photoproduction by deuterons at intermediate energies.... .....*V S Bhasin, V K Gupta and J D Anand* 279–289

Bag-like potential and quarkonium.....*Tej K Zadoo and G Q Sofi* 291–294

Estimation of parameters in parity-violating nuclear force using single-Z-boson factorisation relations.....*M K Parida and C C Hazra* 345–348

On the mass spectroscopy of charmed multiquark hadrons..... .....*G Bhamathi, K Prema and A Ramachandran* 439–449

Higgs bosons production in pp and $p\bar{p}$ collisions.....*Mohammad Sami* 451–460

Photoelectric cross-sections of light elements and compounds at low photon energies....*K S R Sharma, K L Narasimhan, K Prem Chand, S Bhuloka Reddy, ... K Parthasaradhi and V Lakshminarayana* 485–494

Uniqueness of the solution of the Lippmann-Schwinger equation..... .....*Suprokash Mukherjee* 495–500

Optics

Graphical representation of reflection from single and double coating systems on metallic substrate.....*N Barakat, S Mokhtar and W Osman* 215–223

Plasma Physics

Neutral particle modelling assumptions: Theory and experiment..*R Jones* 99–112

On the non-existence of hydrodynamic solution of surface plasmons at the bimetallic interface.....*C Uberoi and J Reyes* 237–241

Surface instability of a current carrying plasma under the influence of a high frequency electric field.....*N Gopalswamy and S Krishan* 473–484

Quantum Mechanics

Newtonian and fluid-dynamical viewpoint of pseudopotentials..... ..... *Sambhu N Datta* 113–120

Solid State Physics

Electrical resistivity studies of certain quasi one-dimensional organic systems at high pressures and low temperatures.. *A K Bandyopadhyay* 47–57

Calculation of phonon life time in amorphous solids..... *Y P Joshi* 59–71

Concentration dependence of the mixed crystal modes of vibration..... ..... *P Nayak and S N Behera* 73–87

Crystalloluminescence and temporary mechanoluminescence of As_2O_3 crystals..... *B P Chandra, P R Tutakne, A C Biyani and B Majumdar* 127–135

Distribution of surface states based on Hill and Coleman conductance technique..... *R J Singh and R S Srivastava* 137–143

Line shape analysis in nuclear quadrupole resonance spectroscopy (I=3/2) ..... *G Krishna Kishore, B V R R K Murthy and G Satyanandam* 145–155

A Mössbauer study of hyperfine interaction in the systems Co_x Mn_{3-x-y} Fe_yO_4 and Ni_x Mn_{3-x-y} Fe_yO_4.... *V K Singh, R Chandra and S Lokanathan* 243–248

Heat capacity of $MnBr_2.4H_2O$ near the antiferromagnetic transition temperature..... *S N Bhatia* 249–259

A neutron diffraction study of ferroelectric $PbHAsO_4$ at room temperature ..... *R N P Choudhary* 325–330

The infrared and laser Raman spectra of $K_2Zn(SO_4)_2 \cdot 6H_2O$..... ..... *B Singh, Shashi Prabha Gupta and B N Khanna* 427–437

Effect of phonon focussing on thermal conductivity of silicon.... *Y P Joshi* 461–472

Spectroscopy

Raman and infrared spectra of tere-phthalaldehyde..... ..... *R A Yadav, Ramakant, P C Mishra and I S Singh* 311–315

Infrared intensity analysis of molecules C_2H_6, C_2D_6, C_2F_6 and CF_4 zero and first order approximations.. *V Buddha Addepalli and N Rajeswara Rao* 317–324
